

## RSM Series

### Remote Switch Modules

#### ENGINEER AND ARCHITECT SPECIFICATIONS

- Key Operated or Toggle
- Maintaining or Momentary
- Mounts in Single Gang Box
- Compatible with All Fire Safety Fire Alarm Controls
- Four Versions for Application Flexibility

#### Introduction

The RSM Series of remote switch modules provide switched inputs to XLS, MXL, PXL, SXL-EX, FS-250 and any Siemens Building Technologies, Fire Safety Division Life Safety System. They can be used for remote control of the system as well as performing tests and creating status inputs. These switches can satisfy numerous specified needs regardless of the system protecting the building.

#### Description

The RSM Series switches are available in four models. Two have keyed switches and two have rocker switches. The keyed variety match the key on Fire Safety control panels. One of each switch type is latching and one is momentary.

The key operated switch models have flying leads on a single pole, normally open contact. The toggle switch models have flying leads on Form 'C' contacts. They mount in a single gang electrical box and include a red cover plate. Additionally, they include 4 labels for Reset, Acknowledge and Drill functions, plus one blank.

#### Ordering Information

| Model Number | Description                        | Part Number |
|--------------|------------------------------------|-------------|
| RSM-1        | Key Switch Module - Maintaining    | 500-696163  |
| RSM-2        | Key Switch Module - Momentary      | 500-696164  |
| RSM-3        | Rocker Switch Module - Maintaining | 500-696165  |
| RSM-4        | Rocker Switch Module - Momentary   | 500-696166  |
