

Intelligent/Conventional Life Safety Control Panel

Overview

EST's QS4 QuickStart life safety control panel provides conventional and intelligent addressable circuits in a single intelligent control panel. Designed for easy setup and simple installation, QuickStart lives up to its name in every respect. QS4's exclusive *QuickStart* auto-learn function, and the option of configuring the panel using convenient front panel programming or from a PC, makes short work of system setup. Devices come on-line in no time as well, thanks to QS4's built-in barcode scanner port. A simple pass of the optional scanner is all it takes to store device information in the QuickStart database. The scanner can also be used for quick and easy text entry when assembling custom messages.

QS4's setup routine is deceptively simple, considering this system's robust features and broad capacity. Supporting up to 1,000 intelligent detectors and modules, QS4 takes full advantage of EST's exclusive Signature Series technology, which provides electronic addressing, automatic device mapping, environmental compensation, and true multisensor detection.

As a hybrid system, QS4 combines Signature Series support along with up to 48 conventional Class B or a combination of 40 Class A and Class B initiating circuits. Compatible with either two-or four-wire detectors, these circuits also provide built-in support for EST's EC family of conventional detectors.

QuickStart's design leaves plenty of room for system expansion. Option cards snap onto QS4's easily-accessible DIN mounting rails These cards include a dialer, auxiliary relays, and additional system capacity. The QS4 also supports as many as eight remote annunciators and up to 60 programmable front panel switches with dual LEDs for system control and display.

Standard Features

- One to four Signature loops each with a capacity of 250 Intelligent devices PLUS up to 48 conventional circuits
- Compatible with two- and four-wire smoke detectors
- Combines the Signature intelligent releasing module with Signature multisensor detectors for reliable suppression
- Failsafe mode ensures uncompromised reliability
- Class A (Style 7) or Class B (Style 4) wiring options
- · Capacity for eight remote annunciators
- Four built-in system relays
- Optional dual line dialer supports Contact ID and 4/2 formats
- Three methods of programming: QuickStart "auto-learn," front panel and personal computer (PC)
- Supports optional barcode scanner for direct device data entry
- Two optional banks of 30 front panel switches with dual LEDs
- Up to 20 adjustable pre-alarm settings for Signature smoke detectors
- Red or grey cabinets in two sizes for surface or semi-flush mounting
- Large 14-line (224 character) backlit LCD display
- Four password levels, plus priority access keyswitch
- Message routing by event type or by individual message
- · Alarm sensitivity by time of day or manual selection
- 1,000 event history buffer, plus alarm history counter
- 6 amp Power Supply, 4.75 amps available for external use
- Envoy graphics compatible
- Compare utility identifies system changes and simplifies testing

Application

QuickStart is a total life safety solution that brings the power of big-system analog technology to small and mid-size applications. Thanks to it's flexibility and simple setup and operation, QS4 is ideal for new installations in schools, apartment buildings, hospitals, office buildings, and retail facilities.

The benefits brought by QS4 to retrofit applications underscores the true potential of this powerful system. As an intelligent panel, QS4 supports Signature Series devices, which can use existing wiring in most retrofit applications. As a conventional panel, QS4 supports compatible devices already installed at the site. And as a hybrid system, the QS4 supports new Signature Series devices, and existing conventional detectors – while leaving plenty of room for expansion. No need to tear a building apart to upgrade the life safety system: with QS4 you have the best of both worlds.

CPU / LCD Display

The QS4 front panel display provides 14 lines by 16 characters of text detailing event, device, diagnostic, and programming informa-

tion. Its large backlit LCD screen is easy to read and always provides at-a-glance indication of the system's state of operation. The CPU/Display Unit houses the CPU card and mounting space for two optional LED/Switch cards.

QS4 is as simple to operate

as it is to set up. Its large 14-line backlit LCD display provides easy-to-understand details concerning up to 1,000 system events, while bright system status LEDs and large, tactile control buttons present the user with a clean, crystal clear interface. Four password levels limit control and information retrieval to authorized personnel. A priority access keyswitch gives Level 2 access, without a password, to management and emergency personnel.

Specifications

Control Panel	Standby Current: 199 mA Alarm Current: 235 mA

Failsafe Mode

If the CPU loses communication with other circuit cards, the power supply card continues to monitor the system for any alarm events. If an alarm occurs on any device or circuit during a communications failure, the power supply activates all alarm outputs and instructs the dialer to transmit a default alarm message to the monitoring station.

Remote Annunciators

QS4 supports up to eight remote annunciators, which provide mirrored annunciation of front panel messages and status indicators. Three annunciator series are available: QSA, SRA, and R.

R-Series Annunciators

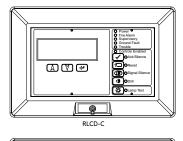

R-Series Annunciators are highperformance remote annunciators that provide status indication and common controls for QuickStart and other compatible fire alarm control panels. This family of annunciators offers LCD or LED annunciation. Models are available with and without common controls.

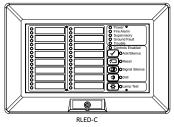

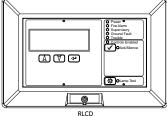

There are three R-Series annunciator models, plus an LED-based expander. Up to two expanders can be connected to any annunciator. The expander includes 24 pairs of LEDs that extend the capabilities of any of the annunciators.

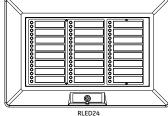

All annunciator models include status LEDs and an internal buzzer. Two models have an LCD text display, and one has 16 pairs of LEDs for zone annunciation. LCD models feature a large back-lit, four by twenty character per line, super-twist liquid crystal display.

R-Series annunciators and expanders are mounted on a standard 4-inch square electrical box, using the included mounting ring. They can also be surface mounted in locking steel enclosures. Three different enclosures are available.

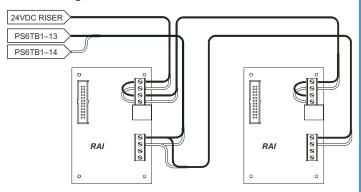

QSA Series

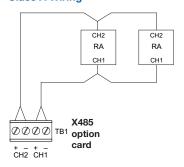

QuickStart's Class A serial remote annunciator bus requires an X485 (RS485) card and UART port at the control panel. Each remote annunciator requires only a

UART port. Class B wiring does not require an X485 card at the control panel. Remote annunciators are available in both analog and conventional versions and with wallboxes for flush or surface mounting. Models are available with one or two annunciator option spaces, each with 30 dedicated switches and LEDs. See the Ordering Table for more information.

SRA Series

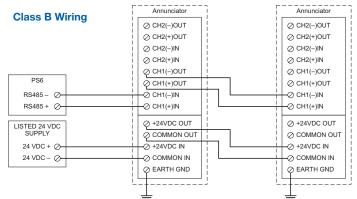

QuickStart SRA Remote Annunciators are standalone units that can be powered by the control panel or by an approved power supply. Annunciators support Class A or Class B connection to the system RS-485 data line, but do not provide ground fault isolation. SRA Annunciators are available in single or multiple loop models.

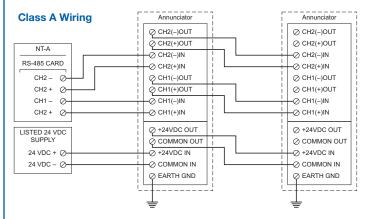

SRA Series Annunciators include an RJ-12 modular jack to allow system database downloads from a laptop computer. Connection requires a programming cable (model number PROG-CABLE-1, ordered separately). Annunciators are mounted to 4-inch square electrical boxes.

Mounting

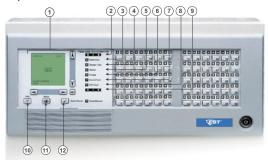

XGD Graphics Driver Card

The XGD Graphics Driver Card is an interface device that connects a QuickStart annunciator to an Envoy Graphic Annunciator. The XGD provides the electronics required to support 24 LEDs and 12 switches on the Envoy display panel. Multiple XGD cards can be chained together in one graphic annunciator cabinet to control larger displays. The QuickStart SRA Series annunciators can support a maximum of six XGD cards.

Operation

Indicators

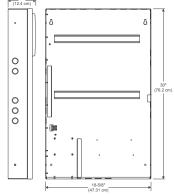

- Text display and controls: Displays system messages, status information, and programming menus. Arrow buttons move the display cursor.
- 2. Alarm LED: Indicates a fire or life threatening emergency.
- Supervisory LED: Indicates an off-normal condition with the fire suppression system or related equipment.
- Disable/Test LED: Indicates part of the system is disabled or being tested. Disabled components also signal a system trouble.
- 5. Monitor LED: Indicates the operation of an ancillary system function (door closures, fan pressure switches).
- Trouble LED: Indicates an off-normal condition or wiring fault that compromises the integrity of the system.
- Ground Fault LED: Indicates a ground fault in the system wiring. Ground faults also signal a system trouble.
- **8. CPU Fail LED:** Indicates an unexpected reboot or failure with the microprocessor. CPU failures also signal a system trouble.
- 9. Power LED: Indicates the panel has power.
- Help button: Provides additional information about the device selected on the display.
- 11. Status button: Displays the Status Menu from which you can identify active or disabled points in the system.
- 12. Panel Silence/Acknowledge button and LED: Acknowledges all events posted in the display queues and turns off the panel buzzer. The panel silenced LED indicates that off normal events have been acknowledged.

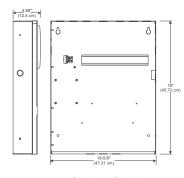

Controls

- 13. Reset button: Allows devices or zones in alarm or trouble to restore to their standby condition. The LED indicates that the panel is resetting.
- 14. Alarm Silence button: Turns active notification appliances off depending on panel programming. Pressing Alarm Silence a second time turns them back on. The LED indicates that the panel is in alarm and operating with notification appliances turned off.
- 15. Drill button: Activates notification appliances depending on panel programming but does not place the panel in alarm. The LED indicates that the panel is in Drill Mode.
- **16. Menu button:** Displays the operator menus.
- Delete button: Returns to the previous menu or backspaces the cursor.
- Enter button: Press the Enter button to accept information or continue to the next item.
- **19. Numeric keypad:** Numbered buttons for entering values and making menu selections.
- Barcode scanner jack: Input for optional barcode scanner.
- Priority Access keyswitch: Enables control functions reserved for access level 2 and above without requiring a password.

QS4 Panel

Standard Components and Option Cards

All QS4 panels come standard with a CPU/Display Unit, and a PS6 Power Supply (see ordering information for details).

QuickStart option cards provide a wide range of features and extra system capacity. Thanks to the convenient Quick-Lok mounting system, option cards snap onto the DIN mounting rails easily and securely. Wallboxes are available in two sizes with room for either five or 12 single-space option cards. Both sizes of wallbox feature easily-accessible mounting rails and plenty of room for cabling.

Standard Component

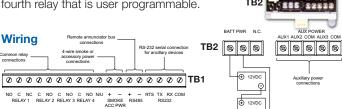

Option Card

12-option card cabinet with option cards and batteries installed.

PS6 Power Supply Card

Description

The PS6 provides primary dc power to all the circuit cards installed in the cabinet. There are four 24 Vdc power output circuits – three for powering auxiliary applications, and one for powering four-wire smoke detectors – and a charging circuit for standby batteries. The PS6 also provides common alarm, supervisory, and trouble relays, as well as a fourth relay that is user programmable.

- Relay 1: Form C. Contacts change position when the control panel processes an alarm signal and remain changed until all active alarm inputs restore and the control panel resets.
- Relay 2: Form A. Contacts change position when the panel processes a supervisory signal and remains changed until all active supervisory inputs restore.
- Relay 3: Form A. Contacts change position when the panel loses power or processes a trouble signal and remains changed until power returns or the trouble clears.
- Relay 4: Form A. Relay closes and opens according to panel programming.

 Smoke/Accessory Power: Jumper setting determines if the 24 Vdc is constant or resettable.

SLIC Signature Loop Intelligent Controller

Description

The SLIC provides one Class A or Class B data circuit (loop) for connecting Signature Series detectors and modules. The SLIC also provides two programmable Class A or Class B notification appliance circuits (NACs) for connecting polarized 24 Vdc notification appliances such as horns and strobes. QS4 supports up to four SLICs.

ZA8-2, ZB16-4 Zone Cards Option Cards

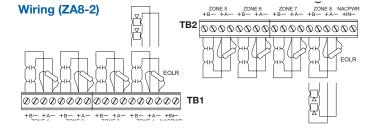

Description

The ZB16-4 Zone Card provides sixteen circuits for connecting Class B conventional input and output zones. Twelve circuits are dedicated initiating device circuits (IDCs) for connecting 2-wire smoke detectors and drycontact initiating devices. Four circuits can be configured as either IDCs or as notification appliance circuits (NACs) for connecting polarized 24 Vdc notification appliances such as horns or strobes.

X485 Class A RS-485 Card and QS-232 Port

Option Cards

Description

The NT-A, which includes the X485/RS-485 card and QS-232/UART port, provides one Class A serial remote annunciator bus for connecting remote annunciator panels. Control panels require the X485 card and QS-232 port, which also serves as a laptop or printer port. The X485 occupies one card space on the chassis rail. The QS-232 port plugs into the panel CPU.
