ENS

TITANIUM 2MP Network Camera

User's Manual

- Please use the specified power supply to connect.
- Do not attempt to disassemble the camera; in order to prevent electric shock, do not remove screws or covers.
- There are no user-serviceable parts inside. Please contact the nearest service center as soon as possible if there is any failure.
- Avoid from incorrect operation, shock vibration, heavy pressing which can cause damage to product.
- Do not use corrosive detergent to clean main body of the camera. If necessary, please use soft dry cloth to wipe dirt; for hard contamination, use neutral detergent. Any cleanser for high grade furniture is applicable.
- Avoid aiming the camera directly towards extremely bright objects, such as, sun, as this may damage the image sensor.
- Please follow the instructions to install the camera. Do not reverse the camera, or the reversing image will be received.
- Do not operate it in case temperature, Relative humidity and power supply are beyond the limited stipulations.
- Keep away from heat sources such as radiators, heat registers, stove, etc.
- Do not expose the product to the direct airflow from an air conditioner.
- This is product instructions not quality warranty. We may reserve the rights of amending the typographical errors, inconsistencies with the latest version, software upgrades and product improvements, interpretation and modification. These changes will be published in the latest version without special notification.
- When this product is in use, the relevant contents of Microsoft, Apple and Google will be involved in. The pictures and screenshots in this manual are only used to explain the usage of our product. The ownerships of trademarks, logos and other intellectual properties related to Microsoft, Apple and Google belong to the above-mentioned companies.
- This manual is suitable for IR water-proof network camera. All pictures and examples used in the manual are for reference only.

Disclaimer

● With regard to the product with internet access, the use of product shall be wholly at your own risks. Our company shall be irresponsible for abnormal operation, privacy leakage or other damages resulting from cyber attack, hacker attack, virus inspection, or other internet security risks; however, Our company will provide timely technical support if necessary.

● Surveillance laws vary from country to country. Check all laws in your local region before using this product for surveillance purposes. We shall not take the responsibility for any consequences resulting from illegal operations.

Cybersecurity Recommendations

● Use a strong password. At least 8 characters or a combination of characters, numbers, and upper and lower case letters should be used in your password.

● Regularly change the passwords of your devices to ensure that only authorized users can access the system (recommended time is 90 days).

● It is recommended to change the service default ports (like HTTP-80, HTTPS-443, etc.) to reduce the risk of outsiders being able to access.

● It is recommended to set the firewall of your router. But note that some important ports cannot be closed (like HTTP port, HTTPS port, Data Port).

● It is not recommended to expose the device to the public network. When it is necessary to be exposed to the public network, please set the external hardware firewall and the corresponding firewall policy.

● In order to enhance the security of WEB client access, please create a TLS certificate to enable HTTPS.

● Use black and white list to filter the IP address. This will prevent everyone, except those specified IP addresses from accessing the system.

● If you add multiple users, please limit functions of guest accounts.

● If you enable UPnP, it will automatically try to forward ports in your router or modem. It is really very convenient for users, but this will increase the risk of data leakage when the system automatically forwards ports. Disabling UPnP is recommended when the function is not used in real applications.

● Check the log. If you want to know whether your device has been accessed by unauthorized users or not, you can check the log. The system log will show you which IP addresses were used to log in your system and what was accessed.

Regulatory Information

FCC Information

1. FCC compliance

The products have been tested and found in compliance with the council FCC rules and regulations part 15 subpart B. These limits are designed to provide reasonable protection against harmful interference. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communication. However, there is no guarantee that interference will not occur in a particular installation. The user will be required to correct the interface at his own expense in case the harmful interference occurs.

2. FCC conditions:

Operation of this product is subject the following two conditions: (1) this device may not cause harmful interface, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CE Information

$C\!\epsilon$ The products have been manufactured to comply with the following directives.
EMC Directive 2014/30/EU

RoHS

The products have been designed and manufactured in accordance with Directive EU RoHS Directive 2011/65/EU and its amendment Directive EU 2015/863 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

2012/19/EU (WEEE directive): The Directive on waste electrical and electronic equipment (WEEE Directive). To improve the environmental management of WEEE, the improvement of collection, treatment and recycling of electronics at the end of their life is essential. Therefore, the product marked with this symbol must be disposed of in a responsible manner.

Directive 94/62/EC: The Directive aims at the management of packaging and packaging waste and environmental protection. The packaging and packaging waste of the product in this manual refers to must be disposed of at designated collection points for proper recycling and environmental protection.

REACH(EC1907/2006): REACH concerns the Registration, Evaluation, Authorization and Restriction of Chemicals, which aims to ensure a high level of protection of human health and the environment through better and earlier identification of the intrinsic properties of chemical substances. The product in this manual refers to conforms to the rules and regulations of REACH. For more information of REACH, please refer to DG GROWTH or ECHA websites.
Table of Contents

This IP-CAMERA (short for IP-CAM) is designed for high performance CCTV solutions. It adopts state-of-the-art video processing chips, integrated with the most advanced technologies (like video encoding and decoding technology) to make the image transmission more stable and smooth. Moreover, the built-in WEB server of this series improves the performance of the traditional surveillance system so that users can be easy to operate and monitor.

This product is widely used in banks, telecommunication systems, electricity power departments, law systems, factories, storehouses, uptowns, etc. In addition, it is also an ideal choice for surveillance sites with middle or high risks.

Main Features

- ICR auto switch, true day/night
- 3D DNR, digital WDR, defog, BLC, HLC
- ROI coding
- Support mobile surveillance by smart phones
- Intelligent Analytics: Video blur detection, line crossing detection, intrusion detection
Surveillance Application

Connect IP-Cam via LAN or WAN. Here only take IE browser for example. The details are as follows:
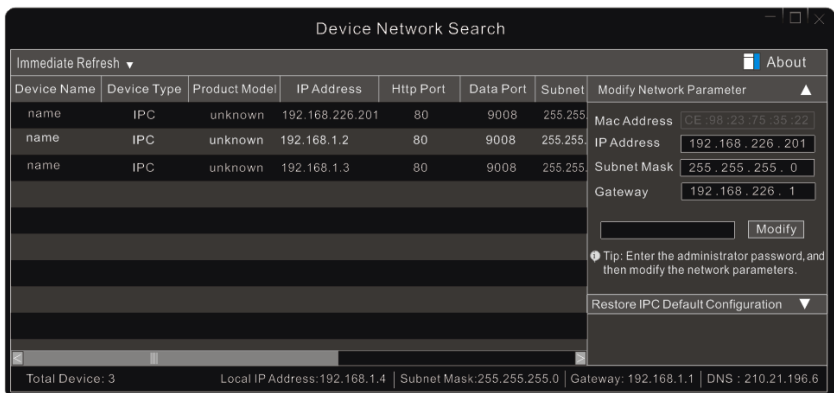

2.1 LAN

In LAN, there are two ways to access IP-Cam: 1. access through IP-Tool; 2. directly access through IE browser.

2.1.1 Access through IP-Tool

Network connection:

① Make sure the PC and IP-Cam are connected to the LAN and the IP-Tool is installed in the PC from the CD.

② Double click the IP-Tool icon on the desktop to run this software as shown below:

③ Modify the IP address. The default IP address of this camera is 192.168.226.201. Click the information of the camera listed in the above table to show the network information on the right hand. Modify the IP address and gateway of the camera and make sure its network address is in the same local network segment as the computer's. Please modify the IP address

of your device according to the practical situation.

For example, the IP address of your computer is 192.168.1.4. So the IP address of the camera shall be changed to 192.168.1.X. After modification, please enter the password of the administrator and click "Modify" button to modify the setting.

☞ The default password of the administrator is "*123456*".

④ Double click the IP address and then the system will pop up the IE browser to connect IP-CAM. Then follow directions to install and run the applicable plug-in.

Enter the username and password to log in.

☞ The default username is "*admin*"; the default password is "*123456*".

The system will pop up the above-mentioned textbox to ask you to change the default password. It is strongly recommended to change the default password for account security. If "Do not show again" is checked, the textbox will not appear next time.

2.1.2 Directly Access through IE

The default network settings are as shown below:
IP address: **192.168.226.201**
Subnet Mask: **255.255.255.0**
Gateway: **192.168.226.1**
HTTP: **80**
Data port: **9008**
Use the above default settings when logging in the camera for the first time. Directly connect the camera to the computer through the network cable.

① Manually set the IP address of the PC and the network segment should be as the same as the default settings of the IP camera. Open the network and share center. Click "Local Area Connection" to pop up the following window.
Select "Properties" and then select internet protocol according to the actual situation (for example: IPv4). Next, click "Properties" button to set the network of the PC.
② Open the IE browser and enter the default address of IP-CAM and confirm.

③ Follow directions to download and install the Active X control.

④ Enter the default username and password in the login window and then enter to view.

2.2 WAN

➢ **Access through the router or virtual server**

① Make sure the camera is connected to the local network and then log in the camera via LAN and go to Config→Network→Port menu to set the port number.

HTTP Port	80
HTTPS Port	443
Data Port	9008
RTSP Port	554

② Go to Config →Network → TCP/IPv4 menu to modify the IP address.

③ Go to the router's management interface through IE browser to forward the IP address and port of the camera in the "Virtual Server".

Router Setup

④ Open the IE browser and enter its WAN IP and http port to access.

➢ **Access through static IP**
Network connection

The setup steps are as follow:

① Go to Config→Network→Port menu to set the port number.

② Go to Config →Network→TCP/IP menu to set the IP address. Check "Use the following IP address" and then enter the static IP address and other parameters.

③ Open the IE browser and enter its WAN IP and http port to access.

After logging in, the following window will be shown.
The following table is the instructions of the icons on the live view interface.

Icon	Description	Icon	Description
⊠	Original size	🔍+	Zoom in
▸1:1◂	Appropriate size	🔍−	Zoom out
☐	Auto	🏃	Motion alarm indicator
⤢	Full screen	SD	SD card recording indicator
👁	Start/stop live view	🔔	Video blur indicator
📷	Snapshot	➡	Line crossing indicator
🔊	Enable/disable audio (only some models support)	📍	Intrusion indicator
🎥	Start/stop record	⊡	AZ control (only available for the model with motorized zoom lens)

● Those smart alarm indicators will flash only when the camera supports those functions and the corresponding events are enabled.
● In full screen mode, double click on the mouse to exit or press the ESC key on the keyboard.

4 Configuration

4.1 System Configuration

4.1.1 Basic Information

In the "Basic Information" interface, the system information of the device is listed.

Device Name	IPC
Product Model	IPC
Brand	Customer
Software Version	4.2.1.0(29587)
Software Build Date	2021-01-23
Kernel Version	20190828
Hardware Version	1.3-1522527
Onvif Version	20.06
OCX Version	2.0.6.3
MAC	00:84:24:43:0f:69

4.1.2 Date & Time

Go to Config→System→Date and Time. Please refer to the following interface.

Select the time zone and DST as desired.
Click the "Date and Time" tab to set the time mode.

4.1.3　Local Configuration

Go to Config➔System➔Local Config to set up the storage path of captured pictures and recorded videos on the local PC. There is also an option to enable or disable the bitrate display in the recorded files.

For the model with audio input connector or built-in MIC, there is an option to enable or disable the audio recording.

4.1.4　Storage

Go to Config➔System➔Storage to go to the interface as shown below.

● **SD Card Management**
Click the "Format" button to format the SD card. All data will be cleared by clicking this button.
Click the "Eject" button to stop writing data to SD card. Then the SD card can be ejected safely.

● **Schedule Recording Settings**
1. Go to Config→System→Storage→Record to go to the interface as shown below.

2. Set record stream, pre-record time and cycle writing.
Pre Record Time: Set the time to record before the actual recording begins.

3. Set schedule recording. Check "Enable Schedule Record" and set the schedule.

Weekly schedule
Set the alarm time from Monday to Sunday for a single week. Each day is divided in one hour increments. Green means scheduled. Blank means unscheduled.
"Add": Add the schedule for a special day. Drag the mouse to set the time on the timeline.
"Erase": Delete the schedule. Drag the mouse to erase the time on the timeline.

Manual Input: Click it for a specific day to enter specific start and end times. This adds more granularities (minutes).

Day schedule
Set the alarm time for alarm a special day, such as a holiday.
Note: Holiday schedule takes priority over weekly schedule.

● **Snapshot Settings**
Go to Config→System→Storage→Snapshot to go to the interface as shown below.

Set the format, resolution and quality of the image saved on the SD card and the snapshot interval and quantity and the timing snapshot here.
Snapshot Quantity: The number you set here is the maximum quantity of snapshots. The actual quantity of snapshots may be less than this number. Supposing the occurrence time of an alarm event is less than the time of capturing pictures, the actual quantity of snapshots is less than the set quantity of snapshots.

Timing Snapshot: Enable timing snapshot first and then set the snapshot interval and schedule. The setup steps of schedule are the same as the schedule recording (See Schedule Recording).

## 4.2 Image Configuration

Image Configuration includes five submenus: Display, Video/Audio, OSD, Video Mask and ROI Config.

4.2.1 Display Configuration

Go to Image→Display interface as shown below. The image's brightness, contrast, hue and

saturation and so on for common, day and night mode can be set up separately. The image effect can be quickly seen by switching the configuration file.
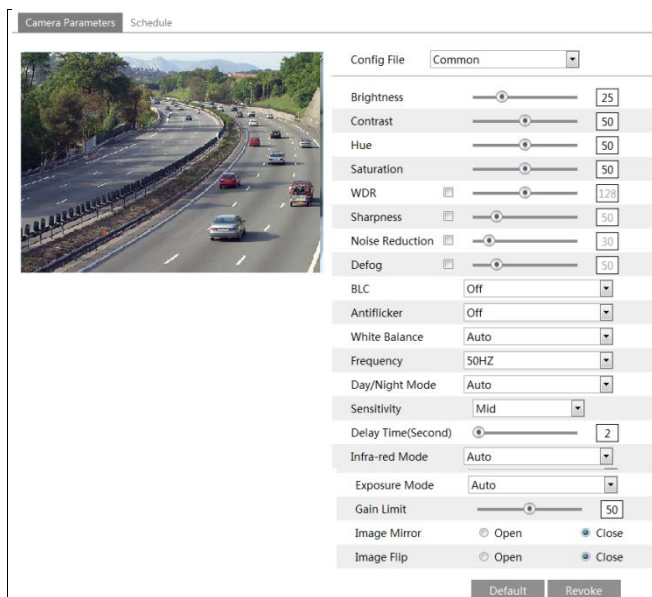

Brightness: Set the brightness level of the camera's image.

Contrast: Set the color difference between the brightest and darkest parts.

Hue: Set the total color degree of the image.

Saturation: Set the degree of color purity. The purer the color is, the brighter the image is.

WDR：WDR can adjust the camera to provide a better image when there are both very bright and very dark areas simultaneously in the field of the view by lowering the brightness of the bright area and increasing the brightness of the dark area.

Sharpness: Set the resolution level of the image plane and the sharpness level of the image edge.

Noise Reduction: Decrease the noise and make the image more thorough. Increasing the value will make the noise reduction effect better but it will reduce the image resolution.

Defog: Activating this function and setting an appropriate value as needed in foggy, dusty, smoggy or rainy environment to get clear images.

Backlight Compensation (BLC):

● Off: disables the backlight compensation function. It is the default mode.

● HLC: lowers the brightness of the entire image by suppressing the brightness of the image's bright area and reducing the size of the halo area.

● BLC: If enabled, the auto exposure will activate according to the scene so that the object of the image in the darkest area will be seen clearly.

Antiflicker:

● Off: disables the anti-flicker function. This is used mostly in outdoor installations.

- 50Hz: reduces flicker in 50Hz lighting conditions.
- 60Hz: reduces flicker in 60Hz lighting conditions.

White Balance: Adjust the color temperature according to the environment automatically.

Frequency: 50Hz and 60Hz can be optional.

Day/night Mode: Please choose the mode as needed.

Sensitivity: High, middle and low can be selected for switching back and forth from day to night modes.

Infrared Mode: Choose "ON", "OFF" and "Auto" (**Some models may not support the infrared mode**).

Exposure Mode: Choose "Auto" or "Manual". If manual is chosen, the digital shutter speed can be adjusted.
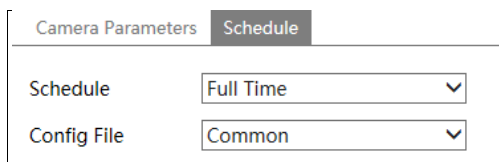

Gain Limit: The higher the gain value is, the higher the brightness of the image is and the more noises of the image are.

Image Mirror: Turn the current video image horizontally.

**Image Flip**: Turn the current video image vertically.

Schedule Settings of Image Parameters:
Click the "Schedule" tab as shown below.

Set full time schedule for common, day, night mode and specified time schedule for day and night. Choose "Timing" in the drop-down box of schedule as shown below.

Drag " " icons to set the time of day and night. Blue means day time and blank means night time. If the current mode of camera parameters is set to Timing, the image configuration mode will automatically switch between day and night according to the schedule.

4.2.2 Video/Audio Settings

The following interface will be displayed by clicking Config→Image→Video/Audio.

Two video streams can be adjustable.

Resolution: The size of image.

Frame rate: The higher the frame rate, the video is smoother.

Bitrate type: CBR and VBR are optional. Bitrate is related to image quality. CBR means that no matter how much change is seen in the video scene, the compression bitrate will be kept constant. VBR means that the compression bitrate will be adjusted according to scene changes. For example, for scenes that do not have much movement, the bitrate will be kept at a lower value. This can help optimize the network bandwidth usage.

Bitrate: it can be adjusted when the mode is set to CBR. The higher the bitrate, the better the image quality will be.

Video Quality: It can be adjusted when the mode is set to VBR. The higher the image quality, the more bitrate will be required.

I Frame interval: It determines how many frames are allowed between a "group of pictures". When a new scene begins in a video, until that scene ends, the entire group of frames (or pictures) can be considered as a group of pictures. If there is not much movement in the scene, setting the value higher than the frame rate is fine, potentially resulting in less bandwidth usage. However, if the value is set too high, and there is a high frequency of movement in the video, there is a risk of frame skipping.

Video Compression: H264/H265/MJPEG can be selected. MJPEG is not available for main stream.

Profile: For H.264. Baseline, main and high profiles are selectable.

Send Snapshot: Select the stream of snapshot.

Video encode slice split: If this function is enabled, smooth image can be gotten even though using the low-performance PC.

Watermark: When playing back the local recorded video in the search interface, the watermark can be displayed. To enable it, check the watermark box and enter the watermark text.

Click the "Audio" tab to go to the interface as shown below.

Audio Encoding: G711A and G711U are selectable.

Audio Type: MIC or LIN

Note: Only the model with audio input connector or built-in MIC can set audio encoding and audio type. Additionally, MIC/LIN In volume can be adjustable as needed. If the model supports audio output, the audio output volume also can be set here.

4.2.3 OSD Configuration

Go to Config→Image→OSD menu to display the interface as shown below:

Time stamp, device name and OSD can be set up here. After enabling the corresponding display and entering the content, drag them to change their position. Then press the "Save" button to save the settings.
4.2.4 Video Mask

Go to Config→Image→Video Mask menu to display the interface as shown below. A maximum of 4 zones can be set up.
To set up video mask
1. Enable video mask.
2. Click the "Draw Area" button and then drag the mouse to draw the video mask area.
3. Click the "Save" button to save the settings.
4. Return to the live to verify that the area have been drawn as shown as blocked out in the image.

To clear the video mask:
Click the "Clear" button to delete the current video mask area.

4.2.5 ROI Configuration

Go to Image→ROI Config interface as shown below. An area in the image can be set as a region of interest. This area will have a higher bitrate than the rest of the image, resulting in better image quality for the identified area.

To set up ROI
1. Check "Enable" and then click the "Draw Area" button.
2. Drag the mouse to set the ROI area.
3. Set the level.
4. Click the "Save" button to save the settings.
4.2.6 Zoom/Focus

This function is only available for the model with motorized zoom lens. Within this section, zoom and focus can be controlled. If the image is out of focus after a manual adjustment, one key focus can be used to set the focus automatically. Go to Config→Image→ Zoom/Focus interface to set.
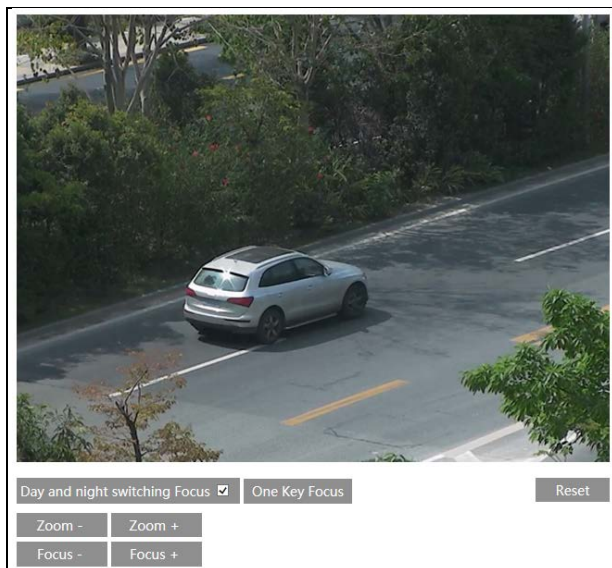

4.3 PTZ Configuration

This function is only available for the model with RS485 interface. It can be used with a compatible external PTZ enclosure. Go to PTZ→Protocol interface as shown below.

4.4 Alarm Configuration

4.4.1 Motion Detection

To set motion detection:

1. Go to Config→Alarm→Motion Detection to set motion detection alarm.

Check "Enable" check box to activate motion based alarms. If unchecked, the camera will not send out any signals to trigger motion-based recording to the NVR or CMS, even if there is motion in the video.

Then select the alarm holding time and set the alarm trigger options.

Trigger Snap: If selected, the system will capture images on motion detection and save the images on an SD card.

Trigger SD Recording: If selected, video will be recorded on an SD card on motion detection.

Trigger Email: If "Trigger Email" and "Attach Picture" are checked (email address must be set first in the Email configuration interface), the captured pictures and triggered event will be sent into those addresses.

Trigger FTP: If "Trigger FTP" is checked, the captured pictures will be sent into FTP server address. Please refer to FTP configuration chapter for more details.

2. Set motion detection area and sensitivity. Click the "Area and Sensitivity" tab to go to the interface as shown below.
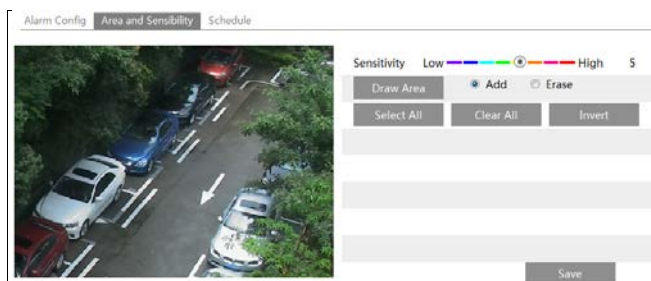

Move the "Sensitivity" scroll bar to set the sensitivity. Higher sensitivity value means that motion will be triggered more easily.

Select "Add" and click "Draw". Drag the mouse to draw the motion detection area; Select "Erase" and drag the mouse to clear motion detection area.
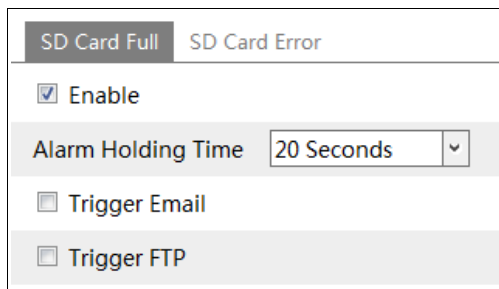

After that, click the "Save" to save the settings.

3. Set the schedule of the motion detection. The schedule setup steps of the motion detection are the same as the schedule recording setup (See Schedule Recording).

4.4.2　Other Alarms

● **SD Card Full**
1. Go to Config→Alarm→Anomaly→SD Card Full.

2. Click "Enable" and set the alarm holding time.
3. Set alarm trigger options. The setup steps are the same as motion detection. Please refer to motion detection chapter for details.

● **SD Card Error**
1. When there are some errors in writing SD card, the corresponding alarms will be triggered.
2. Go to Config→Alarm→Anomaly→SD Card Error as shown below.

3. Click "Enable" and set the alarm holding time.
4. Set alarm trigger options. Trigger Email and FTP. The setup steps are the same as motion detection. Please refer to motion detection chapter for details.

●**IP Address Conflict**
This function is only available for the model with Alarm Out interface.
1. Go to Config→Alarm→Anomaly→IP Address Collision as shown below.

2. Click "Enable alarm" and set the alarm holding time.
3. Trigger alarm out. When the IP address of the camera is in conflict with the IP address of other devices, the system will trigger the alarm out.

● **Cable Disconnection**
This function is only available for the model with Alarm Out interface.
1. Go to Config➔Alarm➔Anomaly➔Cable Disconnected as shown below.

2. Click "Enable" and set the alarm holding time.
3. Trigger alarm out. When the camera is disconnected, the system will trigger the alarm out.

4.4.3 Alarm Server

Go to Alarm➔Alarm Server interface as shown below.
Set the server address, port, heartbeat and heartbeat interval. When an alarm occurs, the camera will transfer the alarm event to the alarm server. If an alarm server is not needed, there is no need to configure this section.

4.4.4 Alarm In

This function is only available for the model with Alarm Input interface. To set sensor alarm (alarm in):

Go to Config→Alarm→Alarm In interface as shown below.

1. Click "Enable" and set the alarm type, alarm holding time and sensor name.
2. Set alarm trigger options. The setup steps are the same as motion detection. Please refer to motion detection chapter for details.
3. Click "Save" button to save the settings.
4. Set the schedule of the sensor alarm. The setup steps of the schedule are the same as the schedule recording setup (See Schedule Recording).

4.5 Event Configuration

For more accuracy, here are some recommendations for installation.

● Cameras should be installed on stable surfaces, as vibrations can affect the accuracy of detection.
● Avoid pointing the camera at the reflective surfaces (like shiny floors, mirrors, glass, lake surfaces and so on).
● Avoid places that are narrow or have too much shadowing.
● Avoid scenario where the object's color is similar to the background color.

● At any time of day or night, please make sure the image of the camera is clear and with adequate and even light, avoiding overexposure or too much darkness on both sides.

4.5.1 Exception

This function can detect changes in the surveillance environment affected by the external factors.

To set exception detection:

Go to Config➔Event➔Exception interface as shown below.
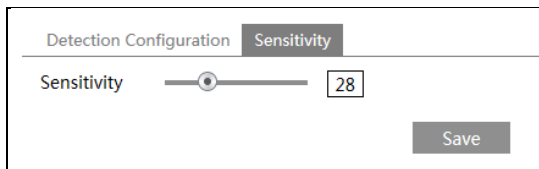

1. Enable "Video blur detection".

Video Blur Detection: Alarms will be triggered if the video becomes blurry.

2. Set the alarm holding time and choose the alarm trigger options. The setup steps are the same as motion detection. Please refer to motion detection chapter for details.

3. Click "Save" to save the settings.

4. Set the sensitivity of the exception detection. Click the "Sensitivity" tab to go to the interface as shown below.

Drag the slider to set the sensitivity value or directly enter the sensitivity value in the textbox. Click "Save" button to save the settings.

The sensitivity value of Video Blur Detection: The higher the value is, the more sensitive the system responds to the blurriness of the image.

※ The requirements of camera and surrounding area

1. Auto-focusing function should not been enabled for exception detection.

2. Try not to enable exception detection when light changes greatly in the scene.

3. Please contact us for more detailed application scenarios.

4.5.2 Line Crossing

Line Crossing: Alarms will be triggered if someone or something crosses the pre-defined alarm lines.

Go to Config→Event→Line Crossing interface as shown below.

1. Enable line crossing alarm.
2. Set the alarm holding time and choose the alarm trigger options. The setup steps are the same as motion detection. Please refer to motion detection chapter for details.
3. Click "Save" to save the settings.
4. Set area and sensitivity of the line crossing alarm. Click the "Area and Sensitivity" tab to go to the interface as shown below.

Set the alarm line number and direction. Up to 4 lines can be added. Multiple lines cannot be added simultaneously.

Direction：A<->B, A->B and A<-B are optional. This indicates the direction of the intruder who crosses over the alarm line that would trigger the alarm.

A<->B: The alarm will be triggered when the intruder crosses over the alarm line from B to A or from A to B.

A->B: The alarm will be triggered when the intruder crosses over the alarm line from A to B.

A<-B: The alarm will be triggered when the intruder crosses over the alarm line from B to A.

Click "Draw Area" and then drag the mouse to draw a line in the image. Click "Stop Draw" to stop drawing. Click "Clear" to delete the lines. Click "Save" to save the settings.

5. Set the schedule of the line crossing alarm. The schedule setup steps of the line crossing detection are the same as the schedule recording setup (See Schedule Recording).

※ **Configuration of camera and surrounding area**
1. Auto-focusing function should not be enabled for line crossing detection.
2. Avoid the scenes with many trees or the scenes with various light changes (like many flashing headlights). The ambient brightness of the scenes shouldn't be too low.
3. Cameras should be mounted at a height of 2.8 meters or above.
4. Keep the mounting angle of the camera at about 45°.
5. The detected objects should not be less than 1% of the entire image and the largest sizes of the detected objects should not be more than 1/8 of the entire image.
6. Make sure cameras can view objects for at least 2 seconds in the detected area for accurate detection.
7. Adequate light and clear scenery are crucial for line crossing detection.

4.5.3 Intrusion

Intrusion: Alarms will be triggered if someone or something intrudes into the pre-defined areas.
Go to Config→Event→Intrusion interface as shown below.

1. Enable region intrusion detection alarm.
2. Set the alarm holding time and choose the alarm trigger options. The setup steps are the same as motion detection. Please refer to motion detection chapter for details.
3. Click "Save" to save the settings.
4. Set the alarm area of the intrusion detection. Click the "Area" tab to go to the interface as shown below.
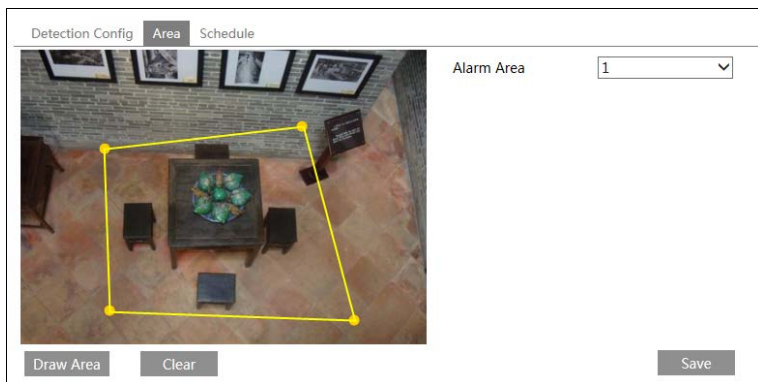

Set the alarm area number on the right side. Up to 4 alarm areas can be added.

Click "Draw Area" and then click around the area where you want to set as the alarm area in the image on the left side (the alarm area should be a closed area). Click "Stop Draw" to stop drawing. Click "Clear" to delete the alarm area. Click "Save" to save the settings.

5. Set the schedule of the intrusion detection. The schedule setup steps of the intrusion detection are the same as the schedule recording setup (See Schedule Recording).

※ Configuration requirements of camera and surrounding area

1. Auto-focusing function should not be enabled for intrusion detection.

2. Avoid the scenes with many trees or the scenes with various light changes (like many flashing headlights). The ambient brightness of the scenes shouldn't be too low.

3. Cameras should be mounted at a height of 2.8 meters or above.

4. Keep the mounting angle of the camera at about 45°.

5. The detected objects should not be less than 1% of the entire image and the largest sizes of the detected objects should not be more than 1/8 of the entire image.

6. Make sure cameras can view objects for at least 2 seconds in the detected area for accurate detection.

7. Adequate light and clear scenery are crucial to intrusion detection.

4.6 Network Configuration

4.6.1 TCP/IP

Go to Config→Network→TCP/IP interface as shown below. There are two ways for network connection.

Use IP address (take IPv4 for example)-There are two options for IP setup: obtain an IP address automatically by DHCP and use the following IP address. Please choose one of the options as needed.

Click "IP Change Notification Config" to go to the interface as shown below.

Trigger Email: when the IP address of the device is changed, a new IP address will be sent to the appointed mailbox automatically.

PPPoE Settings: Click the "PPPoE Config" tab to go to the interface as shown below. Enable PPPoE and then enter the user name and password from your ISP.

4.6.2 Port

Go to Config→Network→Port. HTTP port, Data port and RTSP port can be set.

HTTP Port	80
HTTPS Port	443
Data Port	9008
RTSP Port	554

HTTP Port: The default HTTP port is 80. It can be changed to any port which is not occupied.
HTTPs Port: Optional. The default HTTPs port is 443. It can be changed to any port which is not occupied.
Data Port: The default data port is 9008. It can be changed to any port which is not occupied.
RTSP Port: The default port is 554. It can be changed to any port which is not occupied.

4.6.3 Server Configuration

This function is mainly used for connecting network video management system.

☐ Enable	
Server Port	0
Server Address	
Device ID	1

1. Check "Enable".
2. Check the IP address and auto report port of the transfer media server in the ECMS/NVMS. Then enable the auto report in the ECMS/NVMS when adding a new device. Next, input the remaining information of the device in the ECMS/NVMS. After that, the system will auto allot a device ID. Please check it in the ECMS/NVMS.
3. Input the above-mentioned server address, server port and device ID in the responding boxes. Click "Save" button to save the settings.

4.6.4 DDNS Configuration

If the camera is set up with a DHCP connection, DDNS should be set for the internet.
1. Go to Config→Network→ DDNS.

2. Apply for a domain name. Take www. dvrdyndns.com for example. Input www.dvrdydns.com in the IE address bar to visit its website. Then click "Registration" button.
Create domain name.

After the domain name is successfully applied for, the domain name will be listed as below.

3. Input the username, password, domain you apply for in the DDNS configuration interface.
4. Click "Save" button to save the settings.

4.6.5 802.1x

IEEE802.X is an access control protocol. The setting steps are as follows:

To use this function, the camera shall be connected to a switch supporting 802.1x protocol. The switch can be reckoned as an authentication system to identify the device in a local network. If the camera connected to the network interface of the switch has passed the authentication of the switch, it can be accessed via the local network.
Protocol type and EAPOL version: Please use the default settings.
User name and password: The user name and password must be the same with the user name and password applied for and registered in the authentication server.

4.6.6 RTSP

Go to Config➜Network➜RTSP.

Select "Enable" to enable the RTSP function.
Port: Access port of the streaming media. The default number is 554.
RTSP Address: **RTSP Address**: The RTSP address (unicast) format that can be used to play the stream in a media player.

Multicast Address
Main stream: The address format is
  "rtsp://IP address: rtsp port/profile1?transportmode=mcast".

Sub stream: The address format is
 "rtsp://IP address: rtsp port/profile2?transportmode=mcast".
Audio: Having entered the main/sub stream in a VLC player, the video and audio will play automatically. (it is only available for the model with audio input connector or built-in MIC)
If "Allow anonymous login…" is checked, there is no need to enter the username and password to view the video.
If "auto start" is enabled, the multicast received data should be added into a VLC player to play the video.

Note: 1. This camera support local play through a VLC player. Enter the RTSP address (unicast or multicast, eg. rtsp://192.168.226.201:554/profile1?transportmode=mcast) in a VLC player to realize the simultaneous play with the web client.

2. The IP address mentioned above cannot be the address of IPV6.

3. Avoid the use of the same multicast address in the same local network.

4. When playing the video through the multicast streams in a VLC player, please pay attention to the mode of the VLC player. If it is set to TCP mode, the video cannot be played.

5. If the coding format of the video of the main stream is MJPEG, the video may be disordered at some resolutions.

4.6.7 UPNP

If this function is enabled, the camera can be quickly accessed through the LAN.
Go to Config→Network→UPnP. Enable UPNP and then enter UPnP name.

4.6.8 Mail Configuration

If you need to trigger Email when an alarm happens or IP address is changed, please set the Email here first.
Go to Config→Network →Email.

Sender Address: sender's e-mail address.

User name and password: sender's user name and password.

Server Address: The SMTP IP address or host name.

Select the secure connection type at the "Secure Connection" pull-down list according to what's required.

SMTP Port: The SMTP port.

Send Interval(S): The time interval of sending email. For example, if it is set to 60 seconds and multiple motion detection alarms are triggered within 60 seconds, they will be considered as only one alarm event and only one email will be sent. If one motion alarm event is triggered and then another motion detection alarm event is triggered after 60 seconds, two emails will be sent. When different alarms are triggered at the same time, multiple emails will be sent separately.

Click the "Test" button to test the connection of the account.

Recipient Address: receiver's e-mail address.

4.6.9 FTP

After an FTP server is set up, captured pictures from events will be uploaded to the FTP server. Go to Config→Network →FTP.

Server Name: The name of the FTP server.

Server Address: The IP address or domain name of the FTP.

Upload Path: The directory where files will be uploaded to.

Port: The port of the FTP server.

User Name and Password: The username and password that are used to login to the FTP server.

4.6.10 HTTPS

HTTPs provides authentication of the web site and protects user privacy.
Go to Config →Network→HTTPS as shown below.

There is a certificate installed by default as shown above. Enable this function and save it. Then the camera can be accessed by entering https://IP: https port via the web browser (eg. https://192.168.226.201:443).

A private certificate can be created if users don't want to use the default one. Click "Delete" to cancel the default certificate. Then the following interface will be displayed.

* If there is a signed certificate, click "Browse" to select it and then click "Install" to install it.
* Click "Create a private certificate" to enter the following creation interface.

Click the "Create" button to create a private certificate. Enter the country (only two letters available), domain (camera's IP address/domain), validity date, password, province/state, region and so on. Then click "OK" to save the settings.
* Click "Create a certificate request" to enter the following interface.

Click "Create" to create the certificate request. Then download the certificate request and submit it to the trusted certificate authority for signature. After receiving the signed certificate, import the certificate to the device.

4.6.11 QoS

QoS (Quality of Service) function is used to provide different quality of services for various network applications. Under the deficient bandwidth, the router or switch will sort the data streams and transfer them according to their priority to solve the network delay and network congestion by using this function.
Go to Config→Network→QoS.

Video/Audio DSCP: The range is from 0 to 63.
Alarm DSCP: The range is from 0 to 63.
Manager DSCP: The range is from 0 to 63.
Generally speaking, the larger the number is, the higher the priority is.

4.7 Security Configuration

4.7.1 User Configuration

Go to Config→Security.

Add user:
1. Click "Add" button to pop up the following textbox.

2. Enter user name in "User Name" textbox.
3. Enter letters or numbers in "Password" and "Confirm Password" textbox.
4. Choose the user type. Administrator has all permissions. Normal user can only view the live video. Advanced user has the same permissions as an Administrator except for user, backup settings, factory reset, and upgrading the firmware.
5. Enter the MAC address of the PC in "Bind MAC" textbox.

If this option is enabled, only the PC with the specified MAC address can access the camera for that user.

6. Click the "OK" button and then the newly added user will be displayed in the user list.

Modify user:

1. Select a user to modify password and MAC address if necessary in the user configuration list box.

2. The "Edit user" dialog box pops up by clicking the "Modify" button.

3. Enter the old password of the user in the "Old Password" text box.

4. Enter the new password in the "New password" and "Confirm Password" text box.

5. Enter computer's MAC address as necessary.

6. Click the "OK" button to save the settings.

Note: To change the access level of a user, the user must be deleted and added again with the new access level.

Delete user:

1. Select the user to be deleted in the user configuration list box.

2. Click the "Delete" button to delete the user.

Note: The default administrator account cannot be deleted.

4.7.2 Online Video User

Go to Config→Security→Online User to view the user who is viewing the live video.

4.7.3 Block and Allow List

Go to Config→Security→Block and Allow Lists.

The setup steps are as follows:

Check the "Enable address filtering" check box.

Select "Block/Allow the following address", IPv4/IPv6/MAC and then enter IP address or MAC address in the address box and click the "Add" button.

4.7.4 Security Management

Go to Config→Security→Security Management as shown below.

In order to prevent against malicious password unlocking, "locking once illegal login" function can be enabled here. If this function is enabled, login failure after trying six times will make the login interface locked. The camera can be logged in again after a half hour or after the camera reboots.

4.8 Maintenance Configuration

4.8.1 Backup and Restore

Go to Config→Maintenance→Backup & Restore.

- **Import & Export Settings**

Configuration settings of the camera can be exported form a camera into another camera.

1. Click "Browse" to select the save path for import or export information on the PC.

2. Click the "Import Setting" or "Export Setting" button.

- **Default Settings**

Click the "Load Default" button to restore all system settings to the default factory settings except those you want to keep.

4.8.2 Reboot

Go to Config→Maintenance→Reboot.

Click the "Reboot" button to reboot the device.

Timed Reboot Setting:

If necessary, the camera can be set up to reboot on a time interval. Enable "Time Settings", set the date and time and then Click the "Save" button to save the settings.

4.8.3 Upgrade

Go to Config→Maintenance→Upgrade. In this interface, the camera firmware can be updated.

1. Click the "Browse" button to select the save path of the upgrade file
2. Click the "Upgrade" button to start upgrading the firmware.
3. The device will restart automatically
Caution! Do not close the browser or disconnect the camera from the network during the upgrade.

4.8.4 Operation Log

To query and export log:
1. Go to Config→Maintenance→Operation Log.

2. Select the main type, sub type, start and end time.
3. Click "Search" to view the operation log.
4. Click "Export" to export the operation log.

5 Search

5.1 Image Search

Click Search to go to the interface as shown below. Images that are saved on the SD card can be found here.

● **Local Image Search**
1. Choose "Picture"—"Local".
2. Set time: Select date and choose the start and end time.
3. Click 🔍 to search the images.
4. Double click a file name in the list to view the captured photos as shown above.
Click 🔁 to return to the previous interface.

● **SD Card Image Search**
1. Choose "Picture"—"SD Card".
2. Set time: Select date and choose the start and end time.
3. Choose the alarm events at the bottom of the interface.
4. Click 🔍 to search the images.
5. Double click a file name in the list to view the captured photos.
Click ⬛ to return to the previous interface.

The descriptions of the buttons are shown as follows.

Icon	Description	Icon	Description
	Close: Select an image and click this button to close the image.		Close all: Click this button to close all images.
	Save: Click this button to select the path for saving the image on the PC.		Save all: Click this button to select the path for saving all pictures on the PC.
	Fit size: Click to fit the image on the screen.		Actual size: Click this button to display the actual size of the image.
	Zoom in: Click this button to digitally zoom in.		Zoom out: Click this button to digitally zoom out.
	Slide show play: Click this button to start the slide show mode.		Stop: Click this button to stop the slide show.
	Play speed: Play speed of the slide show.		

5.2 Video Search

5.2.1 Local Video Search

Click Search to go to the interface as shown below. Videos were recorded locally to the PC can be played in this interface.
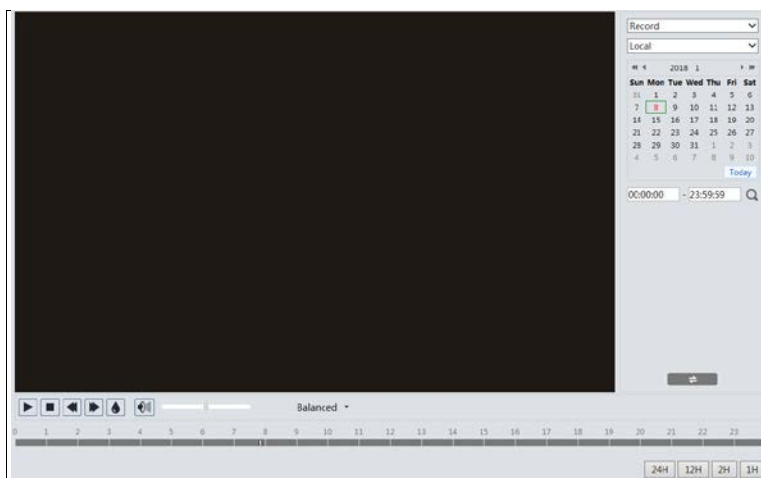

1. Choose "Record"—"Local".
2. Set search time: Select the date and choose the start and end time.
3. Click 🔍 to search the images.
4. Double click on a file name in the list to start playback.

| Icon	Description	Icon	Description
▶	Play button. After pausing the video, click this button to continue playing.	❚❚	Pause button
■	Stop button	◀	Speed down
▶▶	Speed up	◢	Watermark display
🔊 ▬▬▬▬▬▬▬▬▬	Enable / disable audio; drag the slider to adjust the volume after enabling audio (only available for some models).		

5.2.2 SD Card Video Search

Click Search to go to the interface as shown below. Videos that were recorded on the SD card can be played in this interface.

1. Choose "Record"—"SD Card".
2. Set search time: Select the date and choose the start and end time.
3. Click Q to search the images.
4. Select the alarm events at the bottom of the interface.
5. Select mix stream (video and audio stream) or video stream as needed.
6. Double click on a file name in the list to start playback.

The time table can be shown in 24H/12H/2H/1H format by clicking the corresponding buttons.

Video clip and downloading

1. Search the video files according to the above mentioned steps.
2. Select the start time by clicking on the time table.
3. Click ✂ to set the start time and then this button turns blue (✂).
4. Select the end time by clicking on the time table. Then click ✂ to set the end time.
5. Click ↓ to download the video file in the PC.

Click "Set up" to set the storage directory of the video files.
Click "Open" to play the video.
Click "Clear List" to clear the downloading list.
Click "Close" to close the downloading window.

Appendix 1   Q & A

Q: How to find my password if I forget it?
A：Reset the device to the default factory settings.
Default IP: 192.168.226.201
User name: admin
Password: 123456

Q: Fail to connect devices through IE browser, why?
A: Network is not well connected. Please check the connection and make sure it is connected well.
B: IP is not available. Reset the valid IP.
C: Web port number has been revised: contact administrator to get the correct port number.
D: Exclude the above reasons. Recover default setting by IP-Tool.
Note: Default IP: 192.168.226.201，mask number: 255.255.255.0

Q:IP tool cannot search devices, why?
A：It may be caused by the anti-virus software in your computer. Please exit it and try to search device again.

Q:IE c annot download ActiveX control. How can I do?
a. IE browser blocks ActiveX. Please try as below.
① Open IE browser. Click Tools-----Internet Options….
② Select Security------Custom Level….
③ Enable all the sub options under "ActiveX controls and plug-ins".
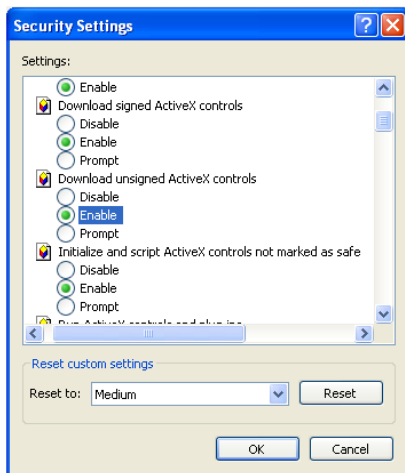

④ Then click OK to finish setup.

b. Other plug-ins or anti-virus blocks ActiveX. Please uninstall or close them.

Appendix 2   Specifications

Specification /Model		Box Network Camera	
Camera	Image Sensor	1/2.8 " CMOS	
	Image Size	1920×1080	
	Electronic Shutter	1s~1/100000s	
	Iris Type	Fixed Iris	
	Min. llumination	Color: 0.0028 lux@F1.2, AGC ON B&W: 0.0002 lux@F1.2, AGC ON	
	Lens Mount	C/CS	
	Day&Night	ICR	
	WDR	Digital WDR	
	Digital NR	3D DNR	
Image	Video Compression	Main Stream: H.264/H.265; Sub Stream: H.264/H.265/MJPEG	
	H.264 Type	Baseline profile/main profile/high profile	
	Video Bit Rate	128Kbps~6Mbps	
	Resolution	1080P (1920 × 1080), 720P (1280×720), D1, CIF, 480×240	
	Main Stream	60Hz: 1080P /720P(1~30fps); 50Hz: 1080P /720P(1~25fps)	
	Sub Stream	60Hz: D1/CIF/480×240 (1~30fps); 50Hz: D1/CIF/480×240 (1~25fps)	
	Audio Compression	G711A/U	
	Image Settings	Saturation, Brightness, Hue, Contrast, Wide Dynamic, Sharpness, NR, etc. adjustable through client or web browser	
	ROI	Each ROI to be configured separately	
Interfaces	Network	RJ45	
	Audio	1CH audio input; 1CH audio output	
	Alarm	1CH alarm input; 1CH alarm output	
	Storage	Built-in micro SD card slot; up to 128GB	
	Reset	Yes	
Fucntion	Remote Monitoring	Web browser, CMS remote control	
	Online Connection	Support simultaneous monitoring for up to 3 users and multi-stream transmission	
	Network Protocol	UDP, IPv4, IPv6, DHCP, NTP, RTSP, DDNS, SMTP, 802.1X, FTP, HTTP, UPnP, HTTPS, QoS	
	Interface Protocol	ONVIF	
	Storage	Network remote storage, micro SD card storage	
	Intelligent Analytics	Video blur detection, intrusion detection and line crossing detection	
	Smart Alarm	Motion alarm, sensor alarm, SD card full, SD card error, IP address conflict, cable disconnection	
	Power	AC24/DC12V/PoE	
	Power Consumption	<4W	
	Opterating Environment	Temperature: -30°C~60°C;　Humidity: <95% (non-condensing)	
	Dimension (mm)	138.4 × 70 × 60.5	
	Weight	Approx. 0.39KG	
	Installation	Wall mounting; ceiling mounting	

Specification /Model		IR Water-proof Bullet Network Camera	
Camera	Image Sensor	1/2.8 " CMOS	
	Image Size	1920×1080	
	Electronic Shutter	1s~1/100000s	
	Iris Type	Fixed Iris	
	Min. llumination	Color: 0.007 lux@F2.0, AGC ON; 0 lux with IR Color: 0.0028 lux@F1.2, AGC ON; 0 lux with IR	
	Lens	2.8 mm @F2.0, H.FoV: 103.5°; V.FoV:54.1°; D.FoV:107.7° 3.6 mm @F1.2, H.FoV: 92°; V.FoV:47.7°; D.FoV:96.7° 6mm@F2.0, H.FoV:52.1 °; V.FoV:30.5°; D.FoV:58.5°	
	Lens Mount	M12	
	Day&Night	ICR	
	WDR	Digital WDR	
	Digital NR	3D DNR	
	Angle Adjustment	Pan：0°~360°; Tilt：0°~80°; Rotation：0°~360°	
Image	Video Compression	Main Stream: H.264/H.265; Sub Stream: H.264/H.265/MJPEG	
	H.264 Type	Baseline profile/main profile/high profile	
	Video Bit Rate	128Kbps~6Mbps	
	Resolution	1080P (1920 × 1080), 720P (1280×720), D1, CIF, 480×240	
	Main Stream	60Hz: 1080P /720P(1~30fps); 50Hz: 1080P /720P(1~25fps)	
	Sub Stream	60Hz: D1/CIF/480×240 (1~30fps); 50Hz: D1/CIF/480×240 (1~25fps)	
	Audio Compression	G711A/U	
	Image Settings	Saturation, Brightness, Hue, Contrast, Wide Dynamic, Sharpness, NR, etc. adjustable through client or web browser	
	ROI	Each ROI to be configured separately	
Interfaces	Network	RJ45	
	Audio	1CH audio input	
	Storage	Built-in micro SD card slot; up to 128GB	
	Reset	Yes	
Fucntion	Remote Monitoring	Web browser, CMS remote control	
	Online Connection	Support simultaneous monitoring for up to 3 users and multi-stream transmission	
	Network Protocol	UDP, IPv4, IPv6, DHCP, NTP, RTSP, DDNS, SMTP, 802.1X, FTP, HTTP, UPnP, HTTPS, QoS	
	Interface Protocol	ONVIF	
	Storage	Network remote storage, micro SD card storage	
	Intelligent Analytics	Video blur detection, intrusion detection and line crossing detection	
	Smart Alarm	Motion alarm, SD card full, SD card error	
Others	IR Distance	20~30 m	
	Protection Grade	IP67	
	Power	DC12V/PoE	
	Power Consumption	< 6W	
	Operating Environment	Temperature: -30°C~60°C; Humidity: <95% (non-condensing)	
	Dimension (mm)	167.5×74.5×74.5	
	Weight	Approx. 0.39KG	
	Installation	Wall mounting; ceiling mounting	

Specification /Model		IR Water-proof Bullet Network Camera	
Camera	Image Sensor	1/2.8 " CMOS
	Image Size	1920×1080
	Electronic Shutter	1s~1/100000s
	Iris Type	Fixed Iris

Image	Video Compression	Main Stream: H.264/H.265; Sub Stream: H.264/H.265/MJPEG
	H.264 Type	Baseline profile/main profile/high profile
	Video Bit Rate	128Kbps~6Mbps
	Resolution	1080P (1920 × 1080), 720P (1280×720), D1, CIF, 480×240
	Main Stream	60Hz: 1080P /720P(1~30fps); 50Hz: 1080P /720P(1~25fps)
	Sub Stream	60Hz: D1/CIF/480×240 (1~30fps); 50Hz: D1/CIF/480×240 (1~25fps)
	Audio Compression	G711A/U
	Image Settings	Saturation, Brightness, Hue, Contrast, Wide Dynamic, Sharpness, NR, etc. adjustable through client or web browser
	ROI	Each ROI to be configured separately
Interfaces	Network	RJ45
	Audio	1CH built-in MIC
	Storage	Built-in micro SD card slot; up to 128GB
	Reset	Yes
Fucntion	Remote Monitoring	Web browser, CMS remote control
	Online Connection	Support simultaneous monitoring for up to 3 users and multi-stream transmission
	Network Protocol	UDP, IPv4, IPv6, DHCP, NTP, RTSP, DDNS, SMTP, 802.1X, FTP, HTTP, UPnP, HTTPS, QoS
	Interface Protocol	ONVIF
	Storage	Network remote storage, micro SD card storage
	Intelligent Analytics	Video blur detection, intrusion detection and line crossing detection
	Smart Alarm	Motion alarm, SD card full, SD card error
Others	IR Distance	20~30 m
	Protection Grade	IP67
	Power	DC12V（PoE power supply optional）
	Power Consumption	< 6W
	Operating Environment	Temperature: -30°C~60°C; Humidity: <95% (non-condensing)
	Dimension (mm)	Ø94.6mm×82.8mm
	Weight（net）	Approx. 0.45KG
	Installation	Ceiling mounting (wall mounting available with junction box and bracket)

Specification /Model		IR Water-proof Turret Network Camera	
Camera	Image Sensor	1/2.8 " CMOS	
	Image Size	1920×1080	
	Electronic Shutter	1s~1/100000s	
	Auto Iris	Fixed Iris	
	Min. llumination	Color: 0.007 lux@F2.0, AGC ON; 0 lux with IR Color: 0.0028 lux@F1.2, AGC ON; 0 lux with IR	
	Lens	2.8~12mm @F1.4,H.FoV: 91°~37.5°; V.FoV:51°~20.5°; D.FoV:96°~42.0°	
	Lens Mount	Ø14	
	Day&Night	ICR	
	WDR	Digital WDR	
	Digital NR	3D DNR	
	Angle Adjustment	Pan：0°~350°; Tilt：0°~80°; Rotation：0°~350°	
Image	Video Compression	Main Stream: H.264/H.265; Sub Stream: H.264/H.265/MJPEG	
	H.264 Type	Baseline profile/main profile/high profile	
	Video Bit Rate	128Kbps~6Mbps	
	Resolution	1080P (1920 × 1080), 720P (1280×720), D1, CIF, 480×240	
	Main Stream	60Hz: 1080P /720P(1~30fps); 50Hz: 1080P /720P(1~25fps)	
	Sub Stream	60Hz: D1/CIF/480×240 (1~30fps); 50Hz: D1/CIF/480×240 (1~25fps)	
	Audio Compression	G711A/U	
	Image Settings	Saturation, Brightness, Hue, Contrast, Wide Dynamic, Sharpness, NR, etc. adjustable through client or web browser	
	ROI	Each ROI to be configured separately	
Interfaces	Network	RJ45	
	Audio	1CH built-in MIC	
	Storage	Built-in micro SD card slot; up to 128GB	
	Reset	Yes	
Fucntion	Remote Monitoring	Web browser, CMS remote control	
	Online Connection	Support simultaneous monitoring for up to 3 users and multi-stream transmission	
	Network Protocol	UDP, IPv4, IPv6, DHCP, NTP, RTSP, DDNS, SMTP, 802.1X, FTP, HTTP, UPnP, HTTPS, QoS	
	Interface Protocol	ONVIF	
	Storage	Network remote storage, micro SD card storage	
	Intelligent Analytics	Video blur detection, intrusion detection and line crossing detection	
	Smart Alarm	Motion alarm, SD card full, SD card error	
Others	IR Distance	30~50 m	
	Protection Grade	IP67	
	Power	DC12V/PoE	
	Power Consumption	< 9.5W	
	Operating Environment	Temperature: -30°C~60°C; Humidity: <95% (non-condensing)	
	Dimension (mm)	Ø111.5mm×99.6mm	
	Weight（net）	Approx. 0.66KG	
	Installation	Ceiling mounting (wall mounting available with junction box and bracket)
